

# Headrest, Arm support and Handgrip

## General

The head/arm/grip support is especially designed to facilitate a comfortable position for a patient during medical procedures while maintaining proper alignment and preventing collision between the equipment involved and the patient. With the head rest back foam, the head is fixated in supine position during (brain) scans. In addition, a hand grip can be used by crossing the hands to optimally fixate the hands and keep the patient confined within the equipment.

## Main applications

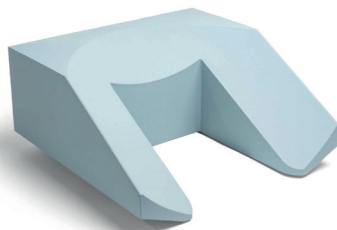

- Research
- Hospital

## Specifications

Overall dimensions 44 x 44 x 33 (LxWxH in cm)

886.119 Handgrip

886.061 Arm support

886.025 Headrest

886.068 Block5 Headrest

FOR-MED is a development and manufacturing company, specialized in customized medical products for radiology, nuclear medicine and radiotherapy.
